CLINICAL MICROSCOPY AND DIAGNOSIS. SECTION I. Urine. The sample should be taken from the entire quantity passed in 24 hours. Otherwise, select a sample passed some hours after a meal. Do not use the morning s urine for routine examination, as in this urine, least evidence of disturbance of the renal functions will be found. Putrefaction soon occurs when urine is allowed to stand, before examination. A crystal or two of thymol tends to prevent this, and does not destroy the efficacy of any of the coarser chemical or microscopical tests. Methods of examination. 1. Physical examination. (a) Note the quantity passed in 24 hours. This is important in calculating the actual daily excretion of any normal or abnormal urinary constituents, as well as determining whether oliguria or polyuria exists. (b) Note the color and such features as turbidity or sediment...
